

What's Next?

It is imperative that we take key actions today in order to ensure that all of our graduates have opportunities to become independent, productive, and successful contributors in a global society.

As we begin a new journey toward district improvement, let us begin again by proclaiming, "Resting on our laurels and past accomplishments is not an option!" We are ready to attack the initiatives that will make our district even better. All we need now are the support and resources to make this happen!

Early Literacy

- Develop and implement a plan to teach all children to learn to read by no later than third grade, so that all may read to learn. This continuum of literacy will enable all students to read actively, critically, and competently for a variety of purposes.

Innovation Pathways

- Develop and implement an innovation pathway that incorporates science, technology, engineering, the arts, media production, music, and/or the traditional specialists, exploratory teachers, and electives.

Equitable Technology Integration

- Develop and implement a plan that ensures equitable technology integration and capacity so that all K – 12 students use technology across all curricular areas to support, enhance, and demonstrate their learning.

Reinstate the Educational Program

- Analyze and evaluate the potential reinstatement of educational programs that were re-structured and/or eliminated due to budget reductions in 2010 and 2013 in order to enhance the educational program and effect class size.
